## Confidence edges up

- Confidence edged up a touch last week, reversing the prior week's decline. It remains well below average.
- Overall financial conditions were little changed, with offsetting moves in 'current' and 'future' finances.
- We also saw offsetting moves in economic conditions. 'Current economic conditions' gained 2.1%, while 'future economic conditions' declined 2.5% last week.
- 'Time to buy a major household item' gained 2.7% compared to a decline of 2.4% previously. The four-week moving average of 'inflation expectations' was up by 0.1ppt to 4.0%. The weekly reading rose to 4.2%, its highest level since early September, perhaps reflecting the lift in headline inflation reported in the December 2019 CPI report.

## ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last weekend (1–2 Feb)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (4-week ma)
108.5	0.5%	108	113.1	4.0%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

## ANZ Head of Australian Economics, David Plank, commented:

Broadly stable consumer confidence in the face of news about the coronavirus, albeit at a level well below average, provides some comfort for the outlook. The decisive policy action taken the Government to protect the health and wellbeing of Australian citizens may be seen as a positive development that provides at least some offset to community concerns about the health and economic consequences of the virus. The coming week will be dominated by RBA commentary and some key data, not least the December retail sales figure, which is expected to confirm weak Christmas spending.

## Confidence gains 0.5% but still well below average

## Charts
