Confidence consolidates

- Confidence declined by 1.1% last week, with the decline following the prior week’s 4% gain. The performance of the sub-indices was mixed, with financial conditions up and the others down.
- Current finances were up by 3.7% for the week, while future finances gained 1.3%.
- In contrast, the economic conditions sub-indices were down; with current economic conditions falling 3.6% and future economic conditions losing 1.7%. The decline in these indices was not that disappointing when compared to the gains of 13.3% and 7% respectively in the previous reading.
- The ‘Time to buy a major household item’ was down by 4.6%. The four-week moving average for inflation expectations was up 0.1ppt to 4%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last week (6-7 Jul)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (four-week ma)
117.6	-1.1%	116.3	113.1	4.0%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

ANZ Head of Australian Economics, David Plank, commented:

“Confidence fell 1.1%, despite the RBA’s second rate cut. The passage of the tax cuts has also not been an immediate boost to sentiment. We need to put this in context, however. Consumer confidence rose sharply in the prior week and is above average, so some consolidation is not completely unexpected. Interestingly, confidence also fell immediately following the June RBA rate cut, suggesting the immediate take-away from monetary easing is not necessarily positive. The mixed nature of last week’s data, with another trade surplus but soft retail sales, may also have contributed.”

Confidence subsides a touch
