Confidence plunges

- Confidence fell by a massive 27.8% last week. This fall has brought the headline index to just above the all-time lows recorded in 1990. Confidence is 17% below the lowest point seen during the global financial crisis (Oct 2008).
- All the sub-components of the survey were plunged. 'Current financial conditions' fell 23.9% while 'future financial conditions' dropped 25.8%.
- The economic conditions subindices were also down sharply, with 'current economic conditions' falling 37.1% and 'future economic conditions' declining by 19.1%.
- 'Time to buy a major household item' fell the most, dropping by 37.2%. The four-week moving average for 'inflation expectations' was stable at 4.0%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

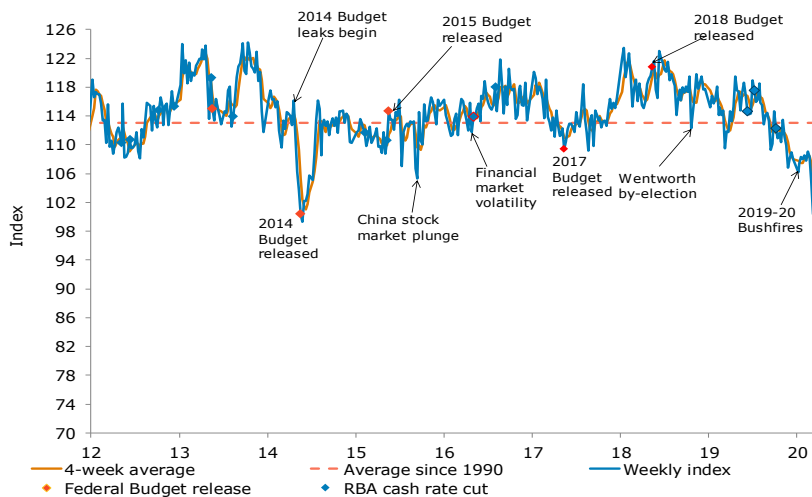

Last weekend (21–22 Mar)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (four-week ma)
72.2	-27.8%	94.4	113.1	4.0%

This weekly ANZ-Roy Morgan Consumer Confidence Rating is based on 1,715 interviews conducted online and over the telephone during the weekend of March 21/22, 2020. Not seasonally adjusted. Further data history on page 6.

ANZ Head of Australian Economics, David Plank, commented:

The increasingly negative news about the impact of the coronavirus pandemic in Australia has had a dramatic impact on consumer sentiment, with confidence showing its biggest ever fall since the survey moved to a weekly basis in 2008. Consumer confidence has been lower than this level, but only just and only during the 1990-91 recession. The plunge was broad-based, with all sub-components of sentiment well below average and well below the levels seen during the GFC. Only the levels seen during the 1990-91 recession are comparable. We should note that the coronavirus has necessitated a change in the survey methodology, away from face-to-face to phone and online interviews. It is possible that this impacted the results, though the consistency of the responses suggests this is unlikely.

Confidence drops massively
